PROFESSIONAL SUMMARY

B.Tech Computer Science (AI & ML) student with hands-on experience building and shipping full-stack AI-powered web applications using Python, Flask, and large language model APIs. Developed two production-ready applications with user authentication, database management, and real-time AI inference. Consistent daily DSA practitioner with 110+ problems solved in C++. Seeking an internship role to apply machine learning engineering, backend development, and analytical skills to customer-facing products at scale.

EDUCATION

B.Tech — Computer Science & Engineering (AI & ML) | [Acropolis Institute of Technology and Research](#) | 2024 – 2028 • Indore, MP

- Specialization in Artificial Intelligence and Machine Learning
- Relevant coursework: Data Structures & Algorithms, Machine Learning, Database Management Systems, Object-Oriented Programming

PROJECTS

AI Resume Analyzer | *Python · Flask · SQLAlchemy · PyPDF2 · python-docx · LLM API · HTML/CSS/JS* | github.com/sakshidangi2006/AI Resume Analyzer

- Built a full-stack web application that parses uploaded PDF and DOCX resumes and generates AI-powered, role-targeted improvement feedback using a large language model API
- Implemented complete user authentication (signup, login, session management) with SQLAlchemy ORM backed by SQLite; each user's data is fully isolated and persistent
- Designed a history dashboard enabling users to review and delete past analyses, supporting iterative resume improvement across multiple sessions
- Handled edge cases in document parsing across both PyPDF2 and python-docx, ensuring reliable text extraction from varied resume formats

Mood Mirror | *Python · Flask · SQLite · Anthropic / OpenAI API · HTML/CSS/JS* | github.com/sakshidangi2006/Mood_Mirror

- Developed an AI-powered mood journaling application where users log entries and receive personalised emotional insights and reflections generated by an LLM
- Architected user authentication with per-user SQLite data isolation and mood history tracking, enabling trend analysis across sessions
- Built a responsive frontend integrated with a Flask backend via clean RESTful routes; deployed locally with zero-dependency setup for easy evaluation

DSA Practice Repository | *C++ · 110+ Problems · 10 Topic-Based Folders* | github.com/sakshidangi2006/DSA

- Solved 110+ DSA problems in C++ with daily consistency, organized by topic: Binary Search, Sliding Window, Two Pointer, HashMap, Kadane's Algorithm, Prefix Sum, Merge Intervals, Stack, Slow-Fast Pointer, and Linked List Reversal
- Maintained structured topic-based folder hierarchy with descriptive commit messages, demonstrating engineering discipline and long-term consistency

Python CLI Projects Collection | *Python · JSON · File I/O · qrcode library* | github.com/sakshidangi2006/Python-Projects

- Built 10+ command-line applications including a Bank Management System with JSON persistence, Expense Tracker, Contact Book, QR Code Generator, and To-Do List Manager
- Applied modular design, error handling, and data persistence patterns throughout; used as a structured Python fundamentals learning log

TECHNICAL SKILLS

Languages: Python, C++, JavaScript, HTML5, CSS3, C

Backend: Flask, SQLAlchemy, SQLite, RESTful APIs, Session Management, MVC Architecture

AI / ML: LLM API Integration (Anthropic Claude, Google Gemini), Scikit-learn, NLTK, TF-IDF, Pandas, NumPy

File Processing: PyPDF2, python-docx (DOCX parsing and text extraction)

Tools: Git, GitHub, Jupyter Notebook, VS Code, Linux CLI

Concepts: Object-Oriented Programming, Data Structures & Algorithms, Database Design, User Authentication, Agile Development

ACHIEVEMENTS & HIGHLIGHTS

- Shipped two AI-powered full-stack web apps as a 2nd-year student — both publicly available on GitHub with auth systems, databases, and LLM integration
- Maintained an unbroken daily DSA habit — 110+ C++ problems solved across 10 algorithmic topics, demonstrating consistency and interview readiness
- Integrated production LLM APIs (Anthropic Claude, Google Gemini) into real applications — a capability beyond standard undergraduate coursework
- Organised Python Projects repo with 10+ CLI applications showcasing breadth of Python skills: file I/O, OOP, data persistence, external libraries

Open to internship opportunities in AI/ML engineering and software development
